Brookhaven Police Department

Drone First Responder (DFR)

- Drones are pre-positioned at launch locations throughout the city.
- Launched to 911 calls for service or known events and are not used for random patrols.
- Average response time is under two minutes.
- Once on scene the drone transmits live footage to responding officers and incident commanders.
- Our use of drones as first responders (DFR) allows officers to view potential hazards and develop sound strategies and tactics before rushing into a potentially dangerous situation.
- All BPD UAS pilots are subject to FAA regulations related to airspace use, and all must have a valid Part 107 Remote Pilot License. UAS pilots are also subject to the BPD policy on UAS operations.
